IRON STAIRCASES

# HAYWARDS IRON STAIRCASES

**H**AYWARDS are the largest makers of Iron Staircases for Fire Escape and General Service in the British Isles, and their experience is unequalled. From one end of the country to the other, private, public, and industrial buildings of all kinds are served by Haywards Staircases, the design and construction of which is a branch of engineering peculiarly suited to their experience and plant.

Haywards engineers are fully qualified to give the finest service possible to architects and others responsible for the construction and maintenance of buildings.

## GENERAL SPECIFICATION

Haywards Iron Fire Escape Staircases are constructed of rolled steel stringers with cast-iron treads and landings, open chequer or other pattern, and with open, slotted or solid risers. The treads and landings are of special non-slip patterns, giving secure foothold, and when of perforated iron, ensuring easy drainage of water and a minimum obstruction of light. The balustrades are of wrought iron with square balusters and convex handrails. These are supplied on one or both sides of stair as required. Supports for staircases vary according to design and construction.
